EarthCam Documents Library Construction with Time-Lapse Construction Camera

October 2012

In a historic decision on June 28, 2010, the San Diego City Council approved construction of the New Central Library, a move which aims to improve the entire 35-branch library system and benefits San Diegans for generations to come. The new library will serve the community's needs for literacy, information and knowledge in the 21st century.

The City Council and Construction Manager, Turner Construction, needed a way to monitor the jobsite activity, document the progress for complete archival record and promote updates to the surrounding community. They turned to EarthCam's innovative construction camera systems to remotely manage the project. EarthCam installed their MegapixelCam Advanced in May 2011 to carefully document all jobsite progress from start to finish in HD clarity. In addition, EarthCam's Website Development Team created a customized web page, enabling the client to effectively communicate with the public. Visitors to the interactive web page can easily browse the catalog of archived images, as well as view an instant up-to-date time-lapse of the progress.

All on-site progress is captured under the watchful eye of EarthCam's reliable webcam system, with the end result being an impressive time-lapse movie. EarthCam producers and editors will comb through the thousands of captured images and professionally edit them into a theatrical-quality movie. The time-lapse will showcase the construction progress from foundation to completion, and will serve as the perfect way to celebrate the accomplishment of this worthwhile project, which is scheduled for its grand opening in July of 2013.
