

Goethals Bridge construction time-lapse

Bridge Construction • April 12, 2019

After a four-year construction process, the new Goethals Bridge linking New York and New Jersey is officially open. The new \$1.5 billion twin-span cable-stayed bridge replaces the original bridge built in 1928. The Port Authority of New York & New Jersey and design-build team Kiewit-Weeks-Massman, AJV relied on [EarthCam's](#) panoramic cameras and portable Mobile TrailerCam solution to document the complex process, which can be seen with EarthCam's new 4K construction time-lapse movie. EarthCam construction cameras documented progress from 2014 to 2018 with high-quality imagery featuring multiple unique perspectives of the project, including the deconstruction and removal of the former bridge.
