

3D Glasses!

Instructions for putting together your 3D glasses

1. Print out this page. Preferably on a heavy stock paper (if your printer allows)
2. Trim the glasses out neatly with a pair of scissors
3. Cut slits on either side of the front of the glasses and on the two end pieces so they interlock
4. Before assembling, tape or glue a clear piece of colored cellophane to the inside of the eye holes.
You could also use a piece of clear plastic food wrap and color with blue and red Sharpies.
5. Interlock the two end pieces into the main frame.
6. Enjoy the 3D webcast!
