EarthCam Helps Keep Close Watch on Projects

April 2012

A premier solution provider in the US, EarthCam is steadily gaining popularity in the Middle East, with remote project management having become an essential component of construction business.

EarthCam has been documenting many notable projects in the region, including Msheireb/Heart of Doha, Doha Convention Centre and Tower, Bahrain Bay Development, Dubai Mall, Saadiyat Cultural District, Jalila Children's Specialty Hospital and Cleveland Clinic.

EarthCam, a global leader in webcam technology and services for the construction industry. EarthCam provides a comprehensive line of wireless time-lapse cameras to monitor jobsites remotely, document progress and promote the project to the public.

What if your architect is in Qatar, the developer is in Germany, the engineer is in America, but the project is in Dubai? No problem! EarthCam cameras can be installed throughout jobsites for remote project management, allowing project teams in several different locations to have virtual eyes on the project at all times. The live streaming and HD megapixel cameras provide the ability to analyze jobsite activity, document compliance and make qualified decisions quickly, from anywhere at any time.

Share updates with the public by streaming live and time-lapsed videos on your website, providing an ever-evolving view of your project. EarthCam's Creative Team will work with you to create and execute a public web page unique to your company and project. Further engage your online community with EarthCam's new social media integration tools. These interactive tools help you share project progress and milestones on platforms such as Facebook, Twitter and YouTube, to extend your reach and awareness.

While EarthCam has steadfastly remained the premier solution provider in the United States, their popularity is quickly gaining in the Middle East, becoming a necessary component on many construction jobsites. EarthCam has documented many notable projects in the region, including Msheireb/Heart of Doha, Doha Convention Center & Tower, Bahrain Bay Development, Dubai Mall, Saadiyat Cultural District, Jalila Children's Specialty Hospital and Cleveland Clinic.

EarthCam has local representation in the Middle East, comprised of knowledgeable product specialists and certified installation technicians. Speak with the local team and learn how you can benefit from EarthCam's complete professional managed services, including consulting services, website development and theatrical-quality time-lapse movies. EarthCam has a team of solar power and wireless bandwidth specialists, who are experienced in engineering systems that will operate in remote locations.

EarthCam's systems are rugged and heavy-duty, and are specifically designed to withstand the challenging environments experienced in the Middle East. Many of the systems are outfitted with a wiper and special washer system, ensuring that the lens remains clean in order to produce images of the utmost clarity. The systems also include sun shields and internal cooling systems, to minimize glare and protect the camera from the extreme heat.

Meet the demands of your major projects by combining the latest, most reliable hardware with smart, powerful software and superb managed services from EarthCam. From concept to execution, you can trust EarthCam's expert engineers to assemble, program, install and manage your network camera system. When you choose EarthCam, you get a complete, end-to-end solution, plus world-class customer service.

The EarthCam's control center ... a revolution in remote project management.
