

# EarthCam Mobile Demonstrates New Mobile Device Applications

Anuradha Shukla,  
April 02, 2008

EarthCam will reportedly demonstrate new mobile device applications at CTIA (News - Alert) Wireless 2008 that range from syndicated content of live streaming video of international landmarks, local traffic, and weather to consumer webcam applications.

EarthCam said that with the addition of hundreds of new cameras, their mobile subscribers can view famous resorts throughout the world or catch the action 24/7 on street cams from hot spots such as Bourbon Street, Times Square and the Las Vegas Strip. A large number of beach views are also available and so are the world-renowned icons and views including the Statue of Liberty among others.

Brian Cury, founder and CEO of EarthCam said in a statement that the scope and variety of their international webcam network dramatically expands their source inventory enabling them to customize and create individualized subscription based products for carriers. He added that the addition of their iPhone ( News - Alert) application will further enhance the value of their expanded content and services.

The EarthCam offerings are available in Java/J2ME, Windows Media, Quick Time and WAP formats. Among these offerings, wireless carrier subscribers have a broad range of options including creating their own "Favorites List" of traffic, weather and international live scenic cameras for their mobile devices.

The company is also demonstrating their popular "My Live Webcam" application that allows customers to keep watch privately over families or pets and monitor their homes, offices and personal property.
