

Single Take! New York's Largest Panoramic Photo Ever Taken

The image was taken with more than 80 gigapixels, captured from the top of the Empire State Building.

April 30, 2021

Outdoor camera technology has come a long way, and **EarthCam's** latest device, **the GigapixelCam X80**, has demonstrated this with the **first largest panoramic photo of New York** ever taken at over 80 gigapixels, captured from the top of the Empire State Building.

The GigapixelCam X80 is a **robotic camera** that can produce panoramic images at **700 percent higher** resolution than EarthCam's previous maximum resolution.

The **image** can be viewed and enlarged through [this link](#). While it is true that an image of such size and weight could be used with any **Internet connection** and browser, the web loads the image in tiles as we get closer to a point.
