

This incredible time-lapse reveals how bridges are built in America

Rob Ludacer Tech Nov. 12, 2016, 11:00 PM

Modern-day bridge construction shares a little more than a passing resemblance to scuba diving. In this time lapse, filmed by [EarthCam](#) and released by Minnesota's Department of Transportation, shows the construction of the St. Croix Crossing. After the piers are constructed on the river floor, premade segments are installed by crane.
