

VIDEO: 4 years of Goethals Bridge construction in 3 minutes

By Kerry Clines • March 22, 2019

The time-lapse video below, taken by [EarthCam](#) for the Port Authority of New York & New Jersey, shows the entire construction process for the \$1.5 billion Goethals Bridge Replacement project from 2014 to 2018. The two new bridges replaced the old bridge between Elizabeth, New Jersey, and Staten Island, New York.

It's fascinating to watch the two sides of the bridge come together and meet in the middle. As each section of the bridge is put into place, the bridge sags just a bit before a new set of cables is attached for support. Viewers can also watch the old bridge being taken down piece by piece.

The Goethals Bridge Replacement not only won an ENR New York Best Projects award in the highway/bridge category and the Excellence in Safety award, but was also chosen unanimously by judges as ENR New York's Project of the Year for 2018.
