

Construction of the Panama Canal for two minutes (video)

25.07.2016 16:18

Five years was the great grand reconstruction of the Panama Canal. The whole process is captured [EarthCam](#) camera.

The Panama Canal has increased in size and bandwidth of more than 2.5 times. It was planned that construction completed for the 100th anniversary of the canal work - by August 2014. It was reported that during construction there are many difficulties.

For example, the excavation technique for the creation of channels had to remove a large amount of soil, which is not far exported and dumped in a nearby valley. The excavated soil began to subside after some time, thereby causing the assemblies, we sat down, and earthquakes.

Around the Panama Canal began the ecological calamity, the consequence of which decreased due to continued use of soil in the construction of dams.
