

EarthCam Unveils Command Watch24

November 19, 2025

EarthCam, a leading provider of construction camera technology and services, today announced the launch of [Command Watch24](#), an enhanced central station monitoring service designed to strengthen perimeter protection for worksites and deliver precise intrusion detection.

EarthCam has significantly increased the accuracy of trespass alerts by leveraging its expertise in AI machine learning. Advanced object classification and feature extraction techniques enable faster, more dependable detections, improving the company's ability to provide continuous protection for active construction projects. Professional agents use video verification to validate alerts and dispatch law enforcement 24/7.

"The launch of EarthCam Command Watch24 delivers a stronger, more advanced central station monitoring service with highly accurate detections and rapid alert response," said Brian Cury, CEO and founder of EarthCam. "This new brand reinforces our commitment to jobsite security by providing innovative video surveillance services for our customers."

Comprehensive benefits of Command Watch24 include the following:

- 24/7 alarm monitoring for continuous site protection.
- Rapid incident response by highly qualified and trained operators.
- AI-driven alert detection for increased accuracy and reduced false alarms.
- Professional agents trained in forensic video verification.
- TMA Five Diamond and UL certifications.
- Real-time notification of alarm events.

Command Watch24 combines advanced detection capabilities with EarthCam's broad portfolio of video surveillance offerings to support safer worksites and more reliable perimeter awareness. Construction professionals already using EarthCam products and services can begin leveraging EarthCam Command Watch24 for a complete end-to-end jobsite solution.
