

WATCH: Live Stream of the New York Wheel Construction

Christopher Olivieri / August 8, 2016

Between now and the middle of 2017, Staten Islanders will see steady progress on the New York Wheel project in St. George. As time goes on, the development site will slowly start to look like the mammoth observation wheel we've seen in renderings. What many Staten Islanders don't know, is that you can watch the progress of the project live on EarthCam.com. [EarthCam](http://EarthCam.com) is most well known as the company that streamed the construction of One World Trade Center.

On the official New York Wheel EarthCam page, not only can you stream the construction live, but you can see panoramas, and time-lapses of the work that's already been completed.
