[EarthCam](#), a technology company that provides live streaming video, has released a time-lapse video of a state project to replace a heavily used bridge on Route 8 in Bridgeport.

The state Department of Transportation recently completed a project to rehabilitate a 43-year-old bridge on Route 8 Bridgeport. About 88,000 vehicles use the bridge daily. Manafort Brothers replaced the bridge superstructure using the “accelerated bridge construction technique.”

The entire process was captured by EarthCam, which released a time-lapse video of the project on Friday.
